## Evidencias 2da parte.

Se instala visual studio code junto con la extensión azure app service.

## Se instala el CLI de Azure

```
PS C:\Users\ALEJANDRA> az --version
azure-cli 2.78.0

core 2.78.0
telemetry 1.1.0

Dependencies:
msal 1.34.0b1
azure-mgmt-resource 23.3.0

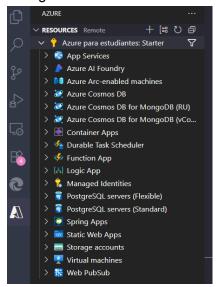

Python location 'C:\Program Files (x86)\Microsoft SDKs\Azure\CLI2\python.exe'
Config directory 'C:\Users\ALEJANDRA\.azure'
Extensions directory 'C:\Users\ALEJANDRA\.azure\cliextensions'

Python (Windows) 3.13.7 (tags/v3.13.7:bcee1c3, Aug 14 2025, 14:06:58) [MSC v.1944 32 bit (Intel)]

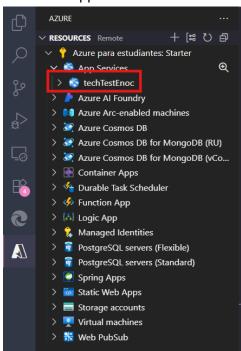

Legal docs and information: aka.ms/AzureCliLegal

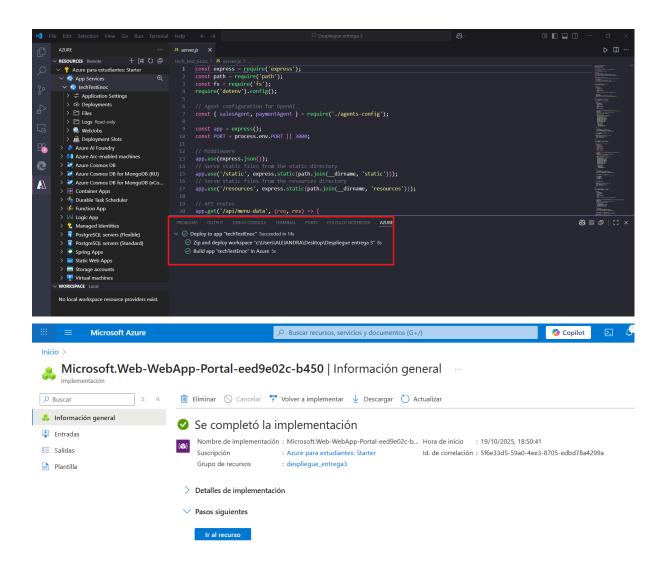

Your CLI is up-to-date.
PS C:\Users\ALEJANDRA>
```

Se ingresa a la extensión de Azure desde Visual Studio Code y se inicia sesión.

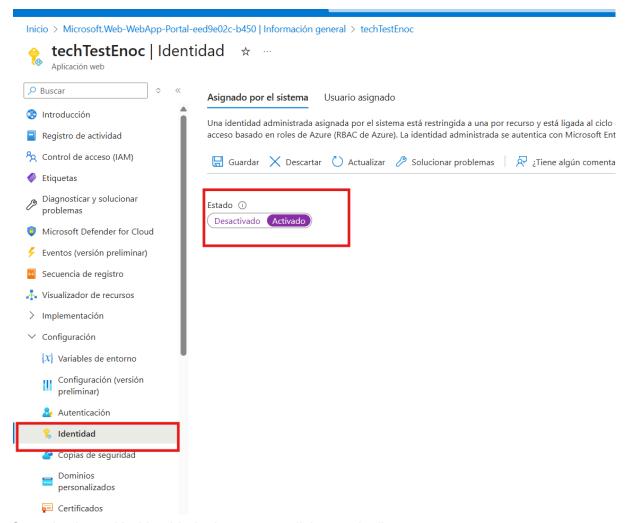

## Se crea el appService techTestEnoc

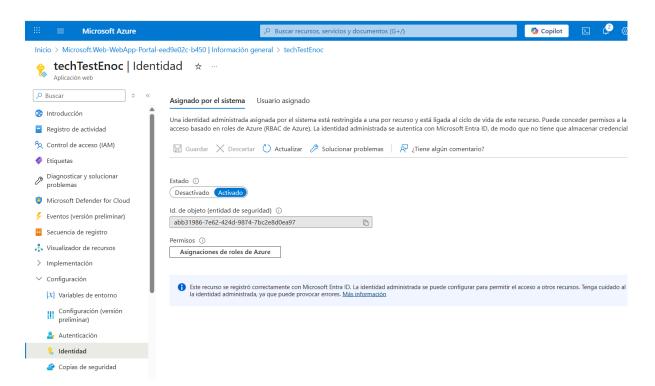

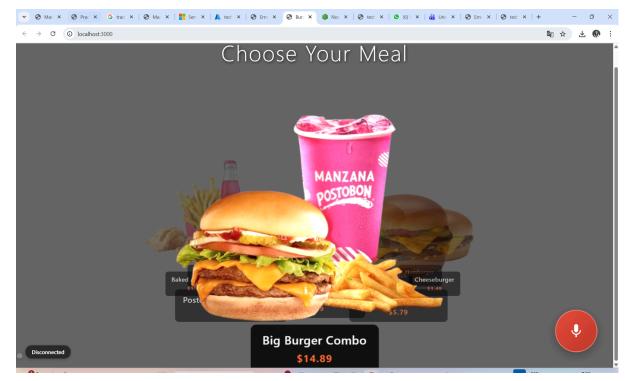

En las 2 imágenes anteriores se observa que se desplegó la aplicación correctamente, tanto desde consola como desde azure.

Se activa la opción identidad tal como se solicita en el taller.

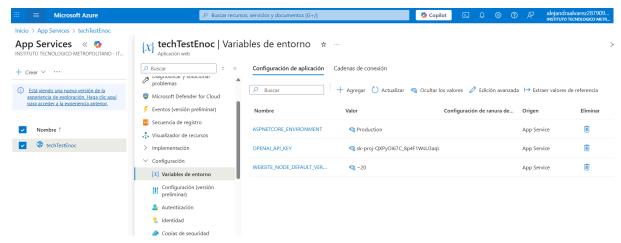

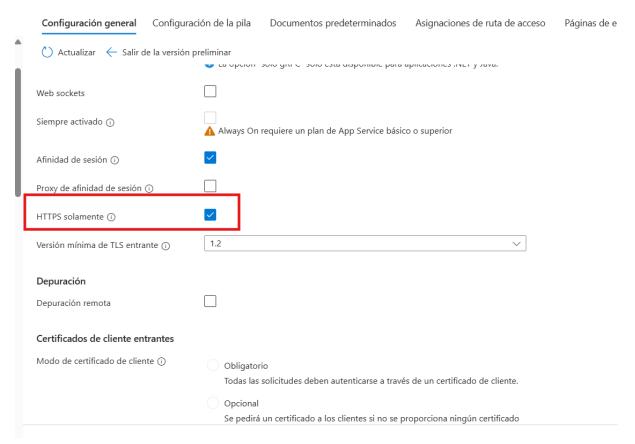

Se observa que la aplicación corre de manera local.

```
ALEJANDRA@LAPTOP-5FLRN8QJ MINGW64 ~/Desktop/Despliegue_entrega_3/tech_test_Enoc
$ az webapp config appsettings list --resource-group despliegue_entrega3 --name
techtestenoc
D:\a\_work\1\s\build_scripts\windows\artifacts\cli\Lib\site-packages\cryptograph
y/hazmat/backends/openssl/backend.py:8: UserWarning: You are using cryptography
on a 32-bit Python on a 64-bit Windows Operating System. Cryptography will be si
gnificantly faster if you switch to using a 64-bit Python.

```

Se verifica que la API funciona.

En las variables de entorno configuramos un application setting

Activamos la opción https only.

Finalmente observamos la aplicación corriendo en la URL pública.
